

Step 3:

Check that all sites are correctly named, and that they belong to the correct location.

Fill in the additional columns with controlled vocabularies.

The columns for class, lithology, and type can take multiple values in the form of a colon-delimited list.

You may use the drop-down menus to add as many values as needed in these columns.

(see the help button for more details)

note: Changes to site_class, site_lithology, or site_type will overwrite er_samples.txt

However, you will be able to edit sample_class, sample_lithology, and sample_type in step 4

**Denotes controlled vocabulary
